

Technology Devices

Courses at the Virtual Learn at Home Secondary School will be taught using a learning management system called Brightspace. Students will require the use of an internet enabled device such as a desktop computer, laptop, Chromebook, or tablet/iPad along with access to the internet.

Students who do not have such a device are asked to contact their home school to borrow one. Students who do not have access to internet or limited internet that won't support synchronous learning (see the document on synchronous learning) are asked to contact their home school to investigate whether an LTE enabled device can be arranged. In cases where synchronous learning is not possible due to internet bandwidth issues, a parent or guardian may contact the Virtual Learn at Home Secondary School to apply for an exemption from synchronous learning. In such cases, students will be supported in their learning through asynchronous learning.
